

Amendments to the Claims

1. (Original) Compounds comprising the chemical structure

wherein X₁, X₂, and X₃ are selected from the group consisting of O, N, and S;
wherein Y₁ and Y₂ are selected from the group consisting of O, N, and S; and
wherein Z is selected from the group consisting of F, Cl, and Br.

2. (Original) Pharmaceutically acceptable salts of the compounds of Claim 1.
3. (Original) Compounds having substantially identical spatial occupation, physiochemical and electrochemical properties as the compounds of Claim 1.
4. (Currently amended) A compound ~~comprising~~ consisting essentially of the chemical

structure

or a pharmaceutically acceptable salt thereof.

5. (Currently amended) A pharmaceutical composition ~~comprising~~ consisting essentially of a compound of claim 1 and a pharmaceutically acceptable carrier.

6. (Original) A compound having the three-dimensional structure characterized by the atomic structure coordinates of Table 5, said compound having less than a 10% difference in the internal coordinates after minimalization with the MM2 force field.
